

# Jewish Hospital

Health Alliance™

The heart is a powerful muscle, pumping blood to every part of the body even before we're born. It's been my privilege to help heal hearts for more than 18 years. In that time, I've seen a lot of changes in cardiovascular medicine. With advancements in what we can do in the cardiac catheterization labs, many patients no longer need open-heart surgery. But for those who do, you'll be comforted to know that we've been performing open-heart surgery at Jewish Hospital since 1969, saving tens of thousands of lives.

I invite you to spend some time on our Web site, and learn more about how your heart works and how we can help you keep it healthy.

Wishing you good health,

A handwritten signature in black ink that reads "Donald Wayne" with a stylized flourish at the end.

Donald Wayne, M.D., FACS  
Medical Director of Cardiology
